

MISSION

To promote and develop biomedical research by providing availability of biological samples and associated data to the scientific community, following scientific and technical best practices in accordance with the current legislation and its bioethical principles.

VISION

To become the reference platform for using human biological samples around the Hospital Clinic environment, to consolidate the biobank's position at a national level and to increase its contribution and participation within international networks.

VALUES

- To guarantee the quality and continuous improvement for all biobank's processes
- Committed to delivering best services and research support
- To ensure the fulfilment of legal and ethical guidelines
- To reinforce professionalism through continuous formation
- To encourage teamwork and personal motivation
- To guarantee the transparency, confidentiality and impartiality in all procedures
